

Must have

- Laptop/Desktop — Linux, macOS, or Windows (WSL)
- Phone — Android or iOS

Downloaded Later in the Project

- Tailscale — Free tier covers 3 devices / 100 users
- Termius — Free SSH client
- Opencode — Installed on your laptop

Step 1: Install CLI AI Interface on your Computer (OpenCode)

1. Go <https://nodejs.org/en/download>
2. Click the Green Windows Installer(.msi)
3. Launch the file once download and go through the process
4. Restart your device for Node.js to show up on CMD
5. Launch Command Prompt as Administrator
6. Paste - “ npm install -g opencode-ai “ and press enter
7. Wait for Opencode to Install
8. Launch opencode by typing “opencode” and press enter
9. You should see the opencode interface

Note: The AI model will have access to information in files in which it is given tasks

Step 2: Install Tailscale on Mobile and Computer

1. Click on this link - <https://tailscale.com/download> or search on Appstore
2. Download for your respective OS
3. Install and sign in with the same account on both devices

Verify connection :

1. On your laptop check hidden icons and right click Tailscale
2. You should see your phone listed under Network Devices>My Devices
3. Note your laptop's IP address (e.g. 100.xxx.xx.x)

Step 3: Download SSH using OpenCode

1. Right Click title bar of the CMD Window
2. Click Properties and enable Ctrl Shift C/V
3. Paste in OpenCode using Ctrl Shift V - "Download OpenSSH Server from <https://github.com/PowerShell/Win32-OpenSSH/releases/latest/download/OpenSSH-Win64.zip>, extract to C:\Program Files\OpenSSH, run install-sshd.ps1 from there, enable PasswordAuthentication and KbdInteractiveAuthentication in C:\ProgramData\ssh\sshd_config, start the sshd service as automatic, and add a firewall rule for port 22."
4. OpenCode will install and enable it for you
5. Wait for process to finish it is expected to take a while (5 - 15 minutes)

Step 4: Install Termius on Your Phone

1. Download Termius using Appstore
2. Open the App, Click on Vaults from the bottom Menu
3. Click on hosts in the section that opens
4. Click the plus button on the bottom left
5. Click New host
6. Alias: give it a name (e.g. "My Laptop")
7. Hostname or IP Address → enter your laptop's Tailscale IP (100.x.x.x)
8. Credentials → enter your laptop username and password
9. If you forgot username type - "whoami" on opencode and it will tell you your username
10. For password enter the password used to unlock your computer
11. Click the tick mark at the top right to save
12. Tap the saved host
13. It will ask you for a keyboard authentication password
14. Type in your microsoft account password not computer unlock password

Step 5: Run opencode

1. In the Termius terminal type - "opencode" and click enter
2. You're now using opencode on your phone, running on your laptop.

Step 6: Persistent Sessions with Tmux (Optional)(For Linux)

Ask opencode on your computer to set up Tmux and connect it to the SSH

This helps load back sessions if network issues leads to a session disconnecting
